

Zaio JavaScript Challenge

Create a Page that looks like the following

- The page should have a white background
- When the box with the text Blue when clicked will change the big box on the right to blue and have the text "hi, my name is blue"
- When the box with the text Green when clicked will change the big box on the right to Green and have the text "hi, my name is Green"
- When the box with the text Red when clicked will change the big box on the right to Red and have the text "hi, my name is Red"
- Once a colour has been selected a calculation should take place that will do the following: e.g if the selected colour is blue, then we get the ASCII value of 'B', 'l', 'u' and 'e' (do some googling on how to get the ASCII value) , add the ASCII values and display the sum on the section that says calculation.
- The Default text on the big box should be as shown in the image above.

Upload the code on github and share the repo with your Mentor.
